Molecular and Cellular Biochemistry:

An International Journal for Chemical Biology in Health and Disease

CONTENTS VOLUMES 133/134, 1994

ROLE OF COUPLED CREATINE KINASES
Valdur A. Saks and Renée Ventura-Clapier, guest editors

Preface 1

I – MUSCLE ENERGY METABOLISM
1a. V.A. Saks and R. Ventura-Clapier: Introduction: history of the problem 5
1b. H.M. Eppenberger: A brief summary of the history of the detection of creatine kinase isoenzymes 9
2. M.D. Osbakken: Metabolic regulation of *in vivo* myocardial contractile function: multiparameter analysis 13
3. Y. Ishida, I. Riesinger, T. Wallimann and R.J. Paul: Compartmentation of ATP synthesis and utilization in smooth muscle: roles of aerobic glycolysis and creatine kinase 39
4. M. Wyss and T. Wallimann: Creatine metabolism and the consequences of creatine depletion in muscle 51

II – SUBSTRATE AND CREATINE KINASE ISOENZYME COMPARTMENTATION
1. D. Brdiczka and T. Wallimann: The importance of the outer mitochondrial compartment in regulation of energy metabolism 69
2. F.N. Gellerich, M. Kapischke, W. Kunz, W. Neumann, A. Kuznetsov, D. Brdiczka and K. Nicolay: The influence of the cytosolic oncotic pressure on the permeability of the mitochondrial outer membrane for ADP: implications for the kinetic properties of mitochondrial creatine kinase and for ADP channelling into the intermembrane space 85
3. S. Soboll, A. Conrad and S. Hebisch: Influence of mitochondrial creatine kinase on the mitochondrial/extramitochondrial distribution of high energy phosphates in muscle tissue: evidence for a leak in the creatine shuttle 105
4. T. Schnyder, M. Rojo, R. Furter and T. Wallimann: The structure of mitochondrial creatine kinase and its membrane binding properties 115
5. R. Ventura-Clapier, V. Veksler and J.A. Hoerter: Myofibrillar creatine kinase and cardiac contraction 125
6. F. Savabi: Interaction of creatine kinase and adenylate systems in muscle cells 145

III – CREATINE KINASES AND METABOLIC INTEGRATION
1. V.A. Saks, Z.A. Khuchua, E.V. Vasilyeva, O. Yu. Belikova and A.V. Kuznetsov: Metabolic compartmentation and substrate channelling in muscle cells. Role of coupled creatine kinases in *in vivo* regulation of cellular respiration – a synthesis 155
2. T. Wallimann and W. Hemmer: Creatine kinase in non-muscle tissues and cells 193
3. J.F. Clark: The creatine kinase system in smooth muscle 221

IV – MOLECULAR BIOLOGY OF CREATINE KINASES
1. R.M. Payne and A.W. Strauss: Expression of the mitochondrial creatine kinase genes 235
2. S.M. Mühlebach, M. Gross, T. Wirz, T. Wallimann, J.-C. Perriard and M. Wyss: Sequence homology and structure predictions of the creatine kinase isoenzymes 245
3. J. van Deursen and B. Wieringa: Approaching the multifaceted nature of energy metabolism: inactivation of the cytosolic creatine kinases via homologous recombination in mouse embryonic stem cells 263

V – DEVELOPMENT AND PATHOLOGICAL ALTERATIONS OF CREATINE KINASES
1. J.A. Hoerter, R. Ventura-Clapier and A. Kuznetsov: Compartmentation of creatine kinases during perinatal development of mammalian heart 277
2. V. Veksler and R. Ventura-Clapier: *In situ* study of myofibrils, mitochondria and bound creatine kinases in experimental cardiomyopathies 287
3. E.K. Seppet and V.A. Saks: Thyroid hormones and the creatine kinase system in cardiac cells 299

VI – METABOLIC REGULATION: THEORETICAL BASIS
1. B.N. Kholodenko, M. Cascante and H.V. Westerhoff: Control theory of metabolic channelling 313
2. M.K. Aliev and V.A. Saks: Mathematical modeling of intracellular transport processes and the creatine kinase systems: a probability approach 333
